

NU-FLAME

NEW GENERATION
ecodesign ready

Affordable quality, attention to detail, low running costs, made in the UK.

For 25 years Nu-Flame has brought together the very best of British Innovation, Design and Engineering to give our customers a range of quality gas fires with the authentic look of a traditional flame. The Nu-Flame range is available only from specially selected fireplace showrooms offering unrivalled customer service. These knowledgeable and friendly local stockists will give you all the necessary advice to help you choose a Nu-Flame fire to suit your individual requirements.

Nu-Flame, a family run business, has invested heavily in our own state of the art factory in Surrey. Unlike some companies, we choose to manufacture all of our fires here in the UK and this enables us to ensure that your fire is built to the highest standards as well as allowing us to react quickly to any changes in the marketplace.

Great design is at the heart of everything we do. Nu-Flame fires combine the latest technologies with tradition and contemporary trends and certainly stand out from the crowd.

Bring a sense of elegance and luxury to the heart of your home. Choose Nu-Flame.

Nu-Flame fires come with a 5 year peace of mind option... ask your stockist for details.

For a reasonable one off payment, the warranty on your Nu-Flame fire can be extended to 5 years. Your stockist can advise you of the current rates.

Q. Why is the Nu-Flame extended warranty option better than other manufacturers' long term guarantees?

A. Our offer represents much better value for money, without hidden terms and conditions that are likely to void your warranty after the first year, or, if followed, can cost you considerably more than the purchase price of the fire.

Nu-Flame would like to thank Capital Fireplaces for supplying the fireplaces used in this brochure, also thanks to Glasswells (World of Furniture) 01473 622422 and Multiyork (www.multiyork.co.uk) 0800 040 7171 for kindly lending us furniture.

Photography, Design and Production by TPW Graphics Ltd (01206) 393888

BRITISH MADE

Every Nu-Flame fire is built to ISO 9001 and CE quality standards.

Why Choose Gas for your Fire?

Why not! Gas is convenient, easy to use, totally reliable and clean. It is also better for the environment and your pocket! With running costs that are almost half that of an equivalent electric fire or wood burning stove also without any mess or storage issues!

For controllability of your room temperature, and running costs, a high efficiency gas fire is without equal. From simple manual controls to high level 'touch' controls and on to full remote control ... it really could not be easier.

Why Choose Nu-Flame?

British Jobs, British Built, British Quality ...

Manufacturing the most innovative gas fires on the market, Nu-Flame leads the way with industry beating efficiencies, low running costs, aesthetic appeal and the widest range of open fronted, high efficiency, ecodesign ready fires available. Traditional, classic, contemporary or modern; we have a solution for every demand.

Nu-Flame's New Generation Fires are *ecodesign* ready!

All of the efficiencies and output figures for the heating appliances in this brochure are independently verified by BSI to the latest British Standard - BS7977-1:2009+A1:2013. As such, our figures are fully compliant with, and ready for, the 2018 ecodesign requirements.

When considering your purchase we urge you to ensure that the appliance has been tested to this latest version of the British Standard as this will give you the assurance that the efficiency figures quoted are up to date. Older designs of fires, verified to earlier versions of the British Standard, might have their efficiencies reduced, or, may be downgraded, to decorative non-heating appliances when the more stringent requirements of ecodesign come into force.

By choosing a Nu-Flame High Efficiency Gas Fire, instead of a less efficient alternative, you will use less gas to heat your room and the carbon emissions will be lower.

Open Fronted

Energis **Vista+**

Energis Vista+ with Chrome effect Profiled frame and Novello Chrome fret

Forget everything you thought you knew about heating because the Energis Vista+ has redefined open fronted fuel effect efficiency and style. The efficiency of 78.6% and heat output of 4.92kW was previously thought to be unattainable on an open fronted fire, but Nu-Flame isn't the kind of company to let its design and development be reined in by narrow thinking. With a wide choice of the highest quality frames and frets the Energis Vista+ gives you elegance, beauty and state of the art technology, all in perfect harmony. Perfection without compromise.

Vitesse Balanced Flue Standen Inset Stove in Textured Black with Chrome Plated handle

The versatility of the Vitesse Balanced Flue Standen Inset Stove allows installation (as shown above) into a chimney breast, on a suitable outside wall, by using the 850mm extended flue option; bringing a condemned chimney back to life with the beauty of flame and the convenience, cleanliness and efficiency of gas. As with all variants of the Vitesse, the Standen Inset Stove model can be upgraded to include non-reflective glass and even black vitreous enamel lining.

We have made every effort to show the finishes as accurately as possible. Unfortunately, we cannot fully reflect the depth and quality of the finishes in print, nor can we guarantee exact colour matches. Your Nu-Flame stockist can show you swatches of the actual finishes used. Please refer to product pages for details of which finishes are available for which items.

In line with our policy of continual improvement, we reserve the right to modify specifications.

The efficiency and output figures quoted in this brochure are the results of tests carried out under laboratory conditions by BSI using the methodology and equipment as laid down in BS7977-1:2009+A1:2013 (except the Vitesse Balanced Flue which is tested to BS EN 613). This enables customers to make a direct comparison between one manufacturer's independently verified figures and another. It also allows our figures to be used in the UK Government's Standard Assessment Procedure (SAP) for the Energy Rating of Dwellings. When installed in any given property the overall performance of any fire could be affected by the individual attributes of the installation such as room insulation, ventilation and the characteristics of the chimney etc.

†† For Chimney Models ventilation not normally required in the UK subject to a satisfactory flue test. For Balanced Flue Models ventilation not required.
† Designed to fit into any pre-cast flue that is compliant with building regulations. Please note that ventilation requirements shown are for the UK and may vary from country to country. In all cases local installation requirements must be followed.

Control Options

The control options available vary depending on the type of fire ordered. Please refer to the product pages which detail the control options available for each fire.

Fully Sequential Remote Control

Powered by 4 standard AA batteries. As well as on/off and variable flame height control, our fully sequential Thermatronic system turns the pilot on and off when extinguishing the fire.

2 Button High Level Touch Control

After manually lighting the permanent pilot, the fire is easily controlled, without bending down, by two buttons housed within the fire frame. This battery powered control allows you to adjust the flame setting and switch to the pilot only setting, by simply pushing a button.

Fully Sequential Wall Switch

The above system can be supplied with a wall switch instead of a handset on our Evolution Plus, Made to Measure and Tapered Burner ranges.

3 Button Fully Sequential High Level Touch Control

As well as on/off and variable flame height our 3 Button High Level Touch Control turns the pilot on and off when extinguishing the fire.

Manual

The Manual control features a single action 'twist and ignite' control valve which establishes the pilot light and allows you to adjust the flame height.

All electronic control systems are powered by standard AA batteries and do not need mains electricity.

Flue Types

Nu-Flame has fires to suit the various types of flue you are likely to have in your home.

Below are brief details. The photographs are a guide only to help identify the type of flue.

Your Nu-Flame stockist will give you further details.

Chimney - Class 1 Flue

All Nu-Flame fires are suitable for a conventional brick built chimney, subject to satisfactory flue test.

Pre-Fabricated - Class 1 & 2 Flues

A pre-fabricated flue is characterised by a metal pipe and terminal appearing through the roof. The majority of Nu-Flame fires are approved for installation with a pre-

fabricated flue system, subject to a satisfactory flue test.

Balanced Flue

Nu-Flame balanced flue fires vent the products of combustion through a horizontal twin wall pipe, which terminates on an outside wall. This requires just a single hole

to be drilled through the wall, and allows the use of a compact, neat looking terminal on the outside wall. If the flue terminal is easily accessible (e.g. adjoining a path) then a mesh terminal guard must be used.

Pre-Cast Flue

We have various fires suitable for use with any pre-cast flue that is compliant with building regulations.

With some installations it might be necessary to have a deeper mantel rebate, or carry out other additional work. Your Nu-Flame stockist can advise you.
